LUKOIL IN AN ENVIRONMENTAL AND EDUCATIONAL ACTION

With the support of LUKOIL SRBIJA, the planting of young Pančić spruces was organized in the yard of the Radoje Domanović Elementary School, with the aim of bringing multiple benefits to the community, because such actions, by personal example, simultaneously teach the younger generation about the values of nature and raise awareness among adults about the necessity of preserving a healthy environment.

In addition to company representatives, the environmental organization "Forest Caravan" and volunteers, students and their teacher also participated in the planting. An educational workshop was previously organized with four thematic units: "The Nature Spelling Book", "World of Recycling", "Insect Hotel" and "Room Garden". For each completed unit, the children received a sticker in their eco-passport, and then named the trees that they would later plant.

Actions that have an ecological and educational character were designed by the organization "Forest Caravan" in cooperation with the Faculty of Forestry in Belgrade, and this was their second project of this kind thanks to funds provided by LUKOIL SRBIJA as part of the program of socially responsible activities.
