SUPPORT FOR THE REVITALIZATION OF THE DELIBLATSKA PEŠČARA

LUKOIL SERBIA supported the revitalization project of the Deliblatska Peščara special nature reserve by donating fuel to the Association of Scouting Organizations of Serbia (ZIOS) for the implementation of the first stage of the project - "2B Peščara is reborn". For this stage, which involves scouting, recording and analyzing the situation after the biggest ecological disaster in Serbia this year, the Company donated 1,400 liters of fuel, which meets the needs of the project for six months.

Thanks to the Company's donation, ZIOS has carried out comprehensive terrain reconnaissance in the past period, on the basis of which a plan of further steps has been determined, which include: collecting seeds and acorns for the preparation of indigenous species of seedlings, the beginning of clearing the wood mass that has burned, inspection of the state of forest communities and marking of trees that need to be cut, felling of trees and extraction of material from Peščara. The state of wild bee societies, which have a significant influence on the development and pollination of plants in Peščara, was also checked, the habitats of animals in the hunting grounds that were not burned were examined, and it was determined that the game managed to escape by escaping from the parts that were burning. The situation was recorded in the area of Čardak and the "Koprivić" farm, where the protected autochthonous type of European nettle tree grows, which was saved from fire.

"LUKOIL SERBIA is the first donor to support our complex revitalization program of this unique natural asset of Serbia. We have gathered volunteer teams and a team of experts made up of external associates from scientific institutes, from the University of Belgrade, as well as business professionals who can help us with their experience and knowledge in the revitalization of areas in Deliblatska peščara", said Zoran Stojković, master of mechanical engineering, scout for many decades and the main coordinator of the project "2B Peščara is reborn" in front of ZIOS. "The support of LUKOIL SERBIA means a lot to us in order to start all important activities and create an operational-scientific base in the abandoned lodges next to the Šumarak and Dragićev Hat hunting grounds, which covers 1,850 hectares, so that we can operate more easily in the field." All activities will be carried out in accordance with the order set by state regulators, the Institute for Lowland Forestry, institutes for nature protection, as well as JP "Vojvodina šume".

In the following period, the game will be counted by species, followed by an examination of the impact of fire on the soil and changes in its properties, and the possibility of using existing wells in seedling irrigation systems, using water from the Danube or the Danube-Tisa-Danube canal, will be examined. The teams are trying to go deeper into the burned areas, check the safety of the terrain with drones, and then go around key points in inaccessible places with all-terrain vehicles, for further screening.
