LUKOIL SUPPORT TO THE TECHNOLOGICAL DEVELOPMENT OF THE TEACHING PROCESS IN SCHOOLS AND KINDERGARTENS

Six educational institutions in cities across Serbia were equipped with interactive smart boards based on donations from LUKOIL SERBIA. In the part of the program of socially responsible activities of the company LUKOIL SERBIA, which refers to the procurement of devices necessary for the improvement of teaching processes in schools, in March of this year the cycle was rounded off with a series of donations of interactive smart boards in educational institutions in Požega, Prijepolje, Apatin, Novi Banovci and Stara Pazova. This cycle was started in December last year with a donation in Čačak. Thanks to the realized program, school institutions are able to encourage creativity, provide better teaching and, through interaction with modern technologies, innovate learning models.

The institutions to which the donations will be sent were chosen in cooperation with the partners who manage LUKOIL SERBIA gas stations.

Starting in 2021, LUKOIL SERBIA is implementing a special program of socially responsible projects with the aim of meeting the needs of a certain number of educational institutions, including those that take care of children with special needs and disabilities. In five years, more than 50 such donor projects were implemented in order to support the development of children and young people.
